

South Kilworth C of E Primary School

Geography Policy

1. Aims and objectives

1.1 Geography teaches an understanding of places and environments. Through their work in geography, children learn about their local area and compare their life in this area with that in other regions in the United Kingdom and in the rest of the world. They learn how to draw and interpret maps and they develop the skills of research, investigation, analysis and problem-solving. Through their growing knowledge and understanding of human geography, children gain an appreciation of life in other cultures. Geography teaching also motivates children to find out about the physical world and enables them to recognize the importance of sustainable development for the future of mankind.

1.2 The aims of geography are:

- To enable children to gain knowledge and understanding of places in the world;
- To increase children's knowledge of other cultures and, in so doing, teach a respect and understanding of what it means to be a positive citizen in a multi-cultural country;
- To allow children to learn graphic skills, including how to use, draw and interpret maps;
- To enable children to know and understand environmental problems at a local, regional and global level;
- To encourage in children a commitment to sustainable development and an appreciation of what 'global citizenship' means;
- To develop a variety of other skills, including those of enquiry, problem solving, ICT, investigation and how to present their conclusions in the most appropriate way.

2. Teaching and learning style

2.1 We use a variety of teaching and learning styles in our geography lessons. We use whole-class and group teaching methods and we combine these with enquiry-based research activities. We encourage children to ask as well as answer geographical questions. We offer them the opportunity to use a variety of data, such as maps, statistics, graphs, pictures, and aerial photographs, and we enable them to use ICT in geography lessons where this serves to enhance their learning. Children take part in role-play and discussions, and they present reports to the rest of the class. They engage in a wide variety of problem-solving activities. Wherever possible, we involve the children in 'real' geographical activities, e.g. research of a local environmental problem or use of the Internet to investigate a current issue.

2.2 We recognise the fact that there are children of widely different geographical abilities in all classes and we provide suitable learning opportunities for all children by matching the challenge of the task to the ability of the child. We achieve this by:

- Setting common tasks which are open-ended and can have a variety of responses;
- Setting differentiated tasks according to ability;
- Providing resources of different complexity according to the ability of the child;
- Using classroom assistants to support the work of individual children or groups of children.

3. Geography curriculum planning

3.1 We use the National Curriculum as the basis for our curriculum planning. We have adapted the national scheme to the local circumstances of our school, i.e. we make use of the local environment in our fieldwork and we also choose a locality where the human activities and physical features provide a contrast to those that predominate in our own immediate area.

3.2 Our curriculum planning is in three phases (long-term, medium-term and short-term). Our long-term plan maps the geography topics studied in each term. The geography subject leader works this out in conjunction with teaching colleagues in each year group. We combine the geographical study with work in other subject areas. At other times we arrange for the children to carry out a geographical study independently.

3.3 We plan the topics in geography so that they build upon prior learning. Children of all abilities have the opportunity to develop their skills and knowledge in each unit and, through planned progression we offer them an increasing challenge as they move up the school.

4. Foundation Stage

4.1 We teach geography in the foundation stage as an integral part of the work covered during the year. We relate the geographical aspects of the children's work to the objectives set out in the Early Learning Goals (ELGs) which underpin the curriculum planning for children aged four to five. Geography makes a significant contribution to the ELG objectives of developing a child's understanding of the world.

5. The contribution of geography to teaching in other curriculum areas

5.1 English

Geography makes a significant contribution to the teaching of English in our school because it actively promotes the skills of reading, writing, speaking and listening. Reports, letters and recording information will all develop children's writing ability. We also use environmental issues as a way of developing the children's writing ability by asking them to record information and write reports and letters.

5.2 Mathematics

Geography in our school contributes to the teaching of mathematics in a variety of ways. We teach the children how to represent objects with maps. The children study space, scale and distance and they learn how to use four- and six-figure grid references. They also use graphs to explore, analyse and illustrate a variety of data.

5.3 Information and communication technology (ICT)

We make provision for the children to use the computer in geography lessons where appropriate. Children use ICT in geography to enhance their skills in data handling and in presenting written work. They research information through the Internet and use ICT equipment (such as cameras) outside the classroom.

5.4 Personal, social and health education (PSHE) and citizenship

Geography contributes significantly to the teaching of personal, social and health education and citizenship. Firstly, the subject matter lends itself to raising matters of citizenship and social welfare. For example, children study the way people re-cycle material and how environments are changed for better or for worse. Secondly, the nature of the subject means that children have the opportunity to take part in debates and discussions. Geography in our school promotes the concept of positive citizenship.

5.5 Spiritual, moral, social and cultural development

We encourage the children to reflect on the impact of mankind on our world and we introduce the concept of 'stewardship' in relation to sustainable development. Through teaching about contrasting localities, we enable the children to learn about inequality and injustice in the world. We help children to develop their knowledge and understanding of different cultures so that they learn to avoid stereotyping other people and acquire a positive attitude towards others. We help contribute to the children's social development by teaching them about how society works to resolve difficult issues of economic development. Geography contributes to the children's appreciation of what is right and wrong by raising many moral questions during the programme of study.

6. Teaching geography to children with special educational needs

6.1 At South Kilworth CofE Primary school we teach geography to all children, whatever their ability. Geography forms part of the school curriculum policy to provide a broad and balanced education to all children. Through our geography teaching we provide learning opportunities that enable all pupils to make progress. We do this by setting suitable learning challenges and responding to each child's different needs. Assessment against the National Curriculum allows us to consider each child's attainment and progress against expected levels.

6.2 When progress falls significantly outside the expected range, the child may have special educational needs. Our assessment process looks at a range of factors – classroom organisation, teaching materials, teaching style, differentiation – so that we can take some additional or different action to enable the child to learn more effectively. This ensures that our teaching is matched to the child's needs.

6.3 Intervention through School Action and School Action Plus will lead to the creation of an Individual Education Plan (IEP) for children with special educational needs.

6.4 We enable pupils to have access to the full range of activities involved in learning geography. Where children are to participate in activities outside the classroom, for example, a field trip, we carry out a risk assessment prior to the activity, to ensure that the activity is safe and appropriate for all pupils.

7. Assessment and recording

7.1 We assess the children's work in geography by:

- Making informal judgements as we observe the children during lessons
- Marking completed work in line with the school's marking policy
- Summary judgement at the end of a unit (Teacher assessment)

7.2 The teacher records assessment outcomes against level descriptions using Classroom Monitor. Assessment outcomes are shared with the Geography co-ordinator who ensures that a tracked record of pupils' attainment and progress is kept.

8. Fieldwork

8.1 Fieldwork is integral to good geography teaching and we include as many opportunities as we can to involve children in practical geographical research and enquiry.

9. Monitoring and review

9.1 The geography subject leader is responsible for monitoring the standard of the children's work and the quality of teaching in geography. The geography subject leader is also responsible for supporting colleagues in the teaching of geography, for being informed about current developments in the subject, and for providing a strategic lead and direction for the subject in the school. The geography subject leader presents the headteacher and governing body with an annual action plan in which s/he evaluates the strengths and weaknesses in the subject and indicates areas for further improvement.

10. Subject co-ordinator

- The Geography co-ordinator is: **Mrs Kerry Willars**
